

I'm Ahmar Rashid Khan, I'm a BCA final year student in Jagannath International Management School, Delhi.

I'm persuaded my schooling from Kanpur and moved to Delhi for higher studies.

I've always been amazed by the rational side of the world, how you can find your way through everything by just looking at the data.

Now, I've got to figure out how to learn the techniques of it, in the most literal form.

There aren't many institutions teaching data analytics right now India.

The question for me was, how I'm going to utilize the analytical mindset I have. I can think through the rationality of everything, of any situation. I wanted to sharpen and utilize this skill to the fullest.

And I found edyoda to help me with that.

It wasn't basically Occam's razor, but there were other variables to it too, like I haven't heard about this institute and everything else altogether.

Then I got in touch with the councillors at edyoda, they helped me through whole process and solved all of my doubts. I got enrolled without giving it another thought or so.

Now I have completed nearly two months in this course.

The teachers are excellent, Mohit is a maestro at teaching python, he literally walks us through each and every code again and again until and unless all of us get the better understanding of the things which are being taught in the classes.

The rest of it can't be better.
